IMAGE AND VISION COMPUTING

Index to Volume 1, Numbers 1–4, Pages 1–248 (1983)

Subject Index

(N) *denotes a news item*

Algorithms
  comparison of thinning algorithms on a parallel processor 115
  for relaxation labelling from an optimization approach 85
  implemented in hardware for detection of cracks using image processing 21
  time- and storage-efficient implementation of an optimal planar convex hull algorithm 140
Array processor (N) 167

Book reviews
  Algorithms for graphics and image processing 105
  Introduction to interactive computer graphics 59
  Languages and architectures for image processing 58
  Machine perception 166
  Map data processing 59
  One-dimensional digital signal processing 58
  Pattern analysis 104
  Realtime medical image processing 105
  The logical processing of digital signals 104
Boundary
  estimation and region digitization 99

Character recognition
  optical system (N) 248
Computer vision
  educational system (N) 107
Conference reports
  Electronic image processing 57
  Pattern recognition 244
Confocal images
  digital processing of 52
Convolution (multidimensional)
  two-level pipelined systolic array 30

Data storage
  optical disc (N) 247
Detection
  of cracks using image processing algorithms implemented in hardware 21
Digital correlation
  method for determination of displacements 133
Digital television
  investigated by British Telecom (N) 63
Digitization
  by microdensitometer (N) 171
  cursor (N) 247
  of regions and boundary estimation 99
Distributed graphics (N) 61
Distributed parameter systems
  approach to feature extraction and motion estimation in image sequences 227

Edge detection
  techniques applied to detection of the bright band in radar data 221

Feature extraction
  and motion estimation in image sequences by a distributed parameter systems approach 227
Framestore
  CRS4000 (N) 170
  system for map displays 157

Greyscale processing
  for industrial applications 178

Hard copy from video
  Mitsubishi (N) 246
  Polaroid (N) 245

Identification
  and segmentation of images according to random-field models 189
Image processing
  algorithms implemented in hardware for detection of cracks 21
LANDSAT
  database manager (N) 60

Map displays
  by a framestore system 157
Market reports
  CADCAM in Western Europe 109
  European market for diagnostic imaging equipment 63
  Machine vision 108
Matching
  of images for pulse echo measurements of ultrasonic velocity 145
Medical applications
  chest radiographs 67
  diagnostic imaging (N) 63
  tomography (N) 168
  3D reconstruction of blood vessels 43
Mitsubishi
  hard copy from video (N) 246
Model-based vision
  program to see a walking person 5
Moment invariants
  in theory and practice 79
Motion estimation
  and feature extraction in image sequences by a distributed parameter systems approach 227

Operating systems
  graphics on CP/M (N) 63
Optimization
  approach to relaxation labelling algorithms 85

Pattern recognition
  and image analysis for industry 174
  of collections 93
Pipelining
  in realtime image processing (N) 167
  two-level systolic array for multidimensional convolution 30
Polaroid
  hard copy from video (N) 245

Radar
  bright band detection by edge detection techniques 221
R&D
  Toshiba (N) 175
Random-field models
  for image identification and segmentation 189
Reconstruction
  in 3D of the blood vessels of the brain from a stereoscopic pair of subtraction angiograms 43
Relaxation labelling
  algorithms from an optimization approach 85
Robot vision
  a new approach for practical solution 234

Satellite
  for weather pictures (N) 175
Segmentation
  advances 196
  and identification of images according to random-field models 189
Signal processing
  optimal floating point multiplication processor 152

Sobel edge detector
accuracy of 37
Spatial referencing
for processing raster and vector data 211
Spectral evaluation
by fast Fourier transform (N) 107

Thermal imaging
germanium lenses replaced by alkali-halide-coated components (N) 63
Tomography
scanner (N) 168

Title Index

Advances in image segmentation 196
An optimization approach to relaxation labelling algorithms 85
Application of edge detection techniques to detection of the bright band in radar data 221
Comparison of thinning algorithms on a parallel processor 115
Detection of cracks using image processing algorithms implemented in hardware 21
Determination of displacements using an improved digital correlation method 133
Digital image processing of confocal images 52
Digital processing of chest radiographs 67
Distributed parameter systems approach to feature extraction and motion estimation in image sequences 227
Framestore system for map displays 157
Greyscale image processing for industrial applications 178
Image identification and segmentation according to random-field models 189
Image matching for pulse echo measurement of ultrasonic velocity 145
Model-based vision: a program to see a walking person 5
Moment invariants in theory and practice 79
On the accuracy of the Sobel edge detector 37
Optimal floating point multiplication processor for signal processing 152
Pattern recognition of collections 93
Practical solution using a new approach to robot vision (Short communication) 234
Region digitization and boundary estimation 99
Spatially referenced methods of processing raster and vector data 211
3D reconstruction of the blood vessels of the brain from a stereoscopic pair of subtraction angiograms 43
Time- and storage-efficient implementation of an optimal planar convex hull algorithm 140
Two-level pipelined systolic array for multidimensional convolution 30
